SETTING UP AN ARENA — 40m x 20m

Requirements:

- 13 standards
- 122m of rope
- letters
- measuring tape - preferably 30m or longer

It is essential that the sides should be straight and the corners square, otherwise it will be impossible to work correctly in it. The length of the diagonal should be 44.72m.

Method: 1. Measure one long side, insert corner standards. Stretch the rope on the ground around the corner standards.

2. Measure 15m on long side X-Y, put in peg.

3. Measure 20m on side X-Z, and adjust rope until measurement Y-Z equals 25m, put in peg.

4. Retaining this line, insert corner standard at Z. Having squared on corner, measure the next long side, and adjust the fourth corner standard until the remaining short side measures 20m.

While measuring, lay all markers where required. When the rope is raised, it will give a straight line and these standards can be put in accordingly. Note: The term 'quarter-marker' is misleading. They are set 6m from the corner on the long sides.

Letters should be set 1/2 metre from the rope. Letter 'A' should be placed as far back as practical from the gateway.
